

HBH Holdings Launches Iron Bishop Engineering Solutions to Provide Specialized Engineering and Design Services for Industrial Markets Nationwide

Cincinnati, Ohio - February 2, 2026 – HBH Holdings, Inc., today announced the launch of Iron Bishop Engineering Solutions (Iron Bishop), a boutique engineering services firm created to serve a wide array of industrial markets nationwide. HBH Holdings Inc. is the parent company of a suite of industrial companies across the United States and Germany specializing in fabrication, construction, and maintenance.

Iron Bishop was established by experienced engineering leaders from Enerfab’s Process Solutions division based in Cincinnati, Ohio, who recognized a growing gap in the market for highly specialized, practical engineering expertise. The company offers tailored solutions grounded in extensive real-world fabrication and operations experience. Designed to complement fabrication and construction partners, Iron Bishop provides focused engineering, design, and technical support that directly addresses complex design and engineering challenges.

“When the team approached me about launching an independent firm, I immediately saw the growth opportunity,” said Scott Anderson, President of HBH Holdings, Inc. “Iron Bishop fills a clear need for practical engineering expertise while giving our people a chance to lead and grow an entrepreneurial business. This initiative demonstrates our commitment to succession planning and providing opportunities for our people to thrive.”

With decades of collective experience in designing and engineering process equipment, Iron Bishop brings a pragmatic, solutions-driven mindset to every project, bridging the gap between the book and what is achievable in real-world fabrication and operations.

Nick Anderson, Director of Iron Bishop, commented, “Having worked on hundreds of fabrication projects, I know there’s a difference between following the book and designing practical, code-compliant solutions. Iron Bishop was created to help customers navigate evolving needs with sound judgment and experience.”

Ben Sprengard, Managing Director of Business Development & Strategy, added, “I began my career with HBH over 17 years ago, and our philosophy has always been about building true partnerships. We realized our expertise could deliver value beyond internal projects. Iron Bishop was launched to make that expertise available to all.”

Iron Bishop Engineering Solutions will operate independently under HBH Holdings, providing specialized engineering services to support fabrication partners and owner/operators in industrial markets worldwide.

About HBH Holdings, Inc.

HBH Holdings, Inc. (HBH) is a privately held investment company that provides invaluable fabrication, construction, and maintenance services across North America to both traditional and emerging markets. These include chemical and petrochemical, oil and gas/refining, pharmaceutical, data centers, food and beverage, agriscience, and fertilizer, among others.
